

Eye Protection

Eye Protection

Infectious diseases and some viruses can spread quickly and can be up to 70 percent fatal. Viruses can enter the body through the eyes, and despite other personal protective gear, the eyes are often left unprotected. Ebola specifically spreads by close, physical contact with a patient's bodily fluids - fluids that are highly infectious – and it only takes a droplet in the eye to infect a person.

SAFETY GLASSES

Safety glasses protect the eyes from glare and harmful objects. Rubber or gel nose piece with adjustable fingers provide comfort and fit.

Model	Description
S3B311147	Crews® Checklite
S3B1145340	Crews® BearKat
S3B554061	ERB Iprotect®
S3B310969	AO Safety BX™
